

### Quick Details of M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump

M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump is human oriented and portable. The wearable material makes it strong and durable. The departed small injection is easy to carry. M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump are designed for structure injection leakage stoppage, crack strengthening with view to dismounting easily. It can stand high pressure. Its component won't be out of shape even working in a high pressure condition. It is the best choice for the professional leakage stoppage and crack strengthening constructors.

#### M999 POLYURETHANE PU HIGH PRESSURE CRACK INJECTION PUMP

Technical Data	
POWER: 600W	RESTART PRESSURE: 7500PSI
SAFE PRESSURE: 0-10000PSI	Voltage/ Hertz: 220V/50Hz
Net Weight: 8kgs	

#### Applications

- Polyurethane Injection
- Pre-mixed Epoxy Injection
- Crack Injection
- Water Control Grouting
- Permeation Grouting
- Compaction Grouting

#### Separately

- Injection Packers
- Grease coupler

#### Operation

- Easy To Use
- Easy To Clean
- Easy To Maintain
- Modular, Compact & Sturdy Design
- Single Component
- Electric Drill Operated
- Heavy Duty For Daily Use
- Drill, Pressure Gauge, Hose Set, Hopper Included but customized.

### Characters of M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump:

#### Single Liquid Design

Used for Single liquid-type Polyurethane PU/ MDI agent or Pre-mixed Epoxy Injection, and other high pressure crack injection.

#### Quick Construction

The working pressure can be raised from 0 to 13000PSI. The injection time is much shorter than other injection pump

#### Light weight

The weight of the pump is 7kg only. It is portable and easy to carry

#### Durable

The components of the injection pump won't be out of shape when the pressure reaches 13000PSI.

#### Simple repair

Can be repaired to avoid stopping working caused by the repair can be avoided.

#### Sustained pressure

The medicament can effectively fill in the small crack and comb to get a good structure strengthening effect.

### Application of M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump:

1. Structure crack, small comb, second construction joint leakage stoppage
2. Structure crack hairline crack, small comb and second construction strengthening
3. Such as subway, diaphragm wall, structure seepage stoppage, basement outside wall leaking area ground improving

### Suitable Material of M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump:

1. Polyurethane Injection
2. Pre-mixed Epoxy Injection
3. Other crack injection agent

### Our Factory of M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump:

Our factory has more experience in production M999 Polyurethane PU/ MDI High Pressure Crack Injection Pump, and we can provide multiple types related products, such as M03 1:1 Double Component Acrylate Agent High Pressure Crack Injection Pump, M600 1:1 Double Component Epoxy High Pressure Crack Injection Pump, etc. We have strong R & D capabilities and can customize to sample. If you want to know more details about these, welcome to contact us!

Looking forward to your inquiry for M03 1:1 Acrylate Agent High Pressure Crack Injection Pump.

Address: Building 1, YongChun Industrial Park, HuangDai Town, XiangCheng District, Suzhou
